Lab 2: Agile Backlog Creation & Sprint Simulation in Jira

PROBLEM STATEMENT #26 | Smart Cities, Transport & Logistics

Peer-to-Peer Carpooling & Expense Splitter

Jira backlog with Epics and User Stories

The screenshot displays a Jira backlog for the 'CARPOOL board' under the space 'Peer-to-Peer Carpooling & Expense Splitter'. The interface includes a left sidebar with navigation options like 'For you', 'Recent', 'Starred', 'Apps', 'Plans', 'Spaces', and 'Dashboards'. The main area shows a search bar, a 'Create' button, and a 'See plans' button. Below these, there's a 'Summary' tab and a 'Backlog' tab. The 'Backlog' tab shows a list of 6 work items, which are categorized into three epics: 'EPIC 1: Ride Publishing', 'EPIC 2: Ride Discovery & Matching', and 'EPIC 3: Carpool Expense Sharing'. Each epic contains several user stories, each with a status (e.g., 'To Do'), a priority (e.g., '3'), and an assignee icon.

Item	Story	EPIC	Status	Priority	Assignee
CARPOOL-4	Story 1.1: Publish Ride	EPIC 1: Ride Publishing	To Do	3	
CARPOOL-5	Story 2.1: Search Available Rides	EPIC 2: Ride Discovery & Matching	To Do	3	
CARPOOL-6	Story 2.2: Calculate Route Compatibility	EPIC 2: Ride Discovery & Matching	To Do	8	
CARPOOL-7	Story 2.3: View Driver Rating and Verification Status	EPIC 2: Ride Discovery & Matching	To Do	3	
CARPOOL-8	Story 2.4: Request Ride	EPIC 2: Ride Discovery & Matching	To Do	5	
CARPOOL-9	Story 3.1: Calculate and Display Fuel Cost Share	EPIC 3: Carpool Expense Sharing	To Do	5	

EPIC 1: Ride Publishing

+

...

≡

+

✓ **Description**

Enable Driver Hosts to publish carpool trips by providing the source, destination, travel time, and number of available seats so that their rides can be made available to Rider Commuters.

Story 1.1: Publish Ride

+

...

≡

+

✓ **Description**

As a Driver Host,
I want to publish a trip by entering my source, destination, travel time, and available seats,
So that Rider Commuters can find my ride for possible carpooling.

EPIC 2: Ride Discovery & Matching

Description

Enable Rider Commuters to search for available rides, determine route compatibility using the 1.5 km detour tolerance, view Driver Host rating and verification information, and select a suitable carpool ride.

Child work items

0% Done

Work	Pri...	Stor...	As...	Status

Story 2.1: Search Available Rides

Description

As a Rider Commuter,
I want to search for available trips using my source, destination, and preferred travel time,
So that I can find suitable carpool options for my commute.

Story 2.2: Calculate Route Compatibility

Description

As a Rider Commuter,
I want the system to calculate route compatibility between my commute and a Driver Host's route,
So that I am shown only rides requiring a driver detour of 1.5 km or less.

Story 2.3: View Driver Rating and Verification Status

Description

As a Rider Commuter,
I want to view a Driver Host's rating and driving-license verification status,
So that I can make a more informed decision before requesting a ride.

Story 2.4: Request Ride

Description

As a Rider Commuter,
I want to request a compatible ride from a Driver Host,
So that I can join the selected carpool trip.

Story 3.1: Calculate and Display Fuel Cost Share

Description

As a Rider Commuter,
I want the system to automatically calculate and display my fuel-cost share for a confirmed carpool trip,
So that I know how much I need to contribute toward the trip's fuel cost.

Burndown Chart

Reflection Questions:

1. Did your estimations reflect the actual effort?

Yes. By following Fibonacci sequence the story points were mostly suitable for the amount of work needed. Simple tasks were given fewer points, while harder tasks like calculating route compatibility were given more points. Since this was only a simulated sprint, the points show expected effort and not actual coding time since we did not physically implement it.

2. Was your backlog well-prioritized?

The most important features were given high priority, such as publishing rides, searching for rides, checking route compatibility, requesting a ride, and calculating the fuel cost share. Viewing the driver's rating and verification status was given medium priority because it is useful, but not as important as the main ride-matching features.

3. How did your simulated sprint align with your plan?

The sprint followed the plan well. The stories were moved from To Do -> In Progress -> Done in a logical order. Some tasks took longer and stayed in progress for some time, while others were completed sooner. By the end of the sprint, all planned work was completed.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart showed that the team completed all **27 story points** by the end of the sprint. The progress was not equal every day. Sometimes the chart stayed flat because tasks were still in progress, and sometimes it dropped quickly because several tasks were completed together. This shows that the team finished the planned work, but the work could have been completed more evenly during the sprint.
